Experience

Software Engineer @ Volkswagen Group of America

Contract via Artech | October 2022 - December 2025 | Belmont, CA

- Built an end-to-end auth stack integrating company single sign-on and role-based access control, injecting role claims into JWTs and enforcing least-privilege, role-scoped access in AWS Lambda workflows with corresponding frontend route/resource guards.
- Maintained cron-scheduled serverless pipelines where fetcher Lambdas ingest telemetry and publish documents to SQS for OpenSearch indexing, while an aggregator enriches indices and bulk-writes curated datasets.
- Modernized a Lambda-per-endpoint API into a single FastAPI service using router modularization, standardizing request/response models with Pydantic and auto-generating OpenAPI docs to reduce contract drift.
- Delivered vehicle/charging dashboard for scheduled charging decisions using carbon intensity, solar production, and energy cost signals, plus sustainability KPI reporting and historical session analytics.
- Drove product from R&D into North America and EU pilots for Volkswagen brand employees, coordinating rollout across stakeholder teams.
- Contributed to cloud vehicle inference platform that streams V2C data via Kafka into Kubernetes-hosted workloads to run real-time neural-network inference and return driving-function outputs back to vehicles.
- Owned an end-to-end Kafka logging/analysis tool that intercepted and deserialized DDS vehicle telemetry payloads and persisted structured logs to Azure Blob Storage for offline analysis and debugging.
- Implemented Cypress e2e tests as a Kubernetes CronJob with Slack alerting to catch regressions and validate service stability.
- Served as lead/sole frontend engineer across internal CRUD products, owning frontend architecture for file ingestion and AI-assisted workflows and coordinating API contracts from prototype to production.

Software Engineer @ Rivian

November 2021 - August 2022 | Palo Alto, CA

- Shipped self-service permissions management for EDV fleet customers, enabling hundreds of fleet owners to manage user access/roles.
- Developed and deployed an Apollo Federated GraphQL subgraph using TypeGraphQL as a single source of truth for schema and resolvers, improving scalability and maintainability of vehicle service.
- Led identity management API migration to new major version in internal user management app, coordinating with teams for a smooth transition.
- Increased automated test coverage from ~70% to 95% with Jest/React Testing Library, improving release confidence and reducing regressions.

Software Engineer @ Codesmith

February 2021 - August 2021 | New York, NY

- Built and maintained internal tools and an online learning platform serving 150,000+ annual users, partnering with Content & Growth shareholders to ship features end-to-end.
- Refactored Express middleware to standardize SQL CRUD operations, reducing duplicated query logic and improving maintainability.
- Maintained a custom YAML-based content pipeline (in place of a CMS) that mapped static content to React components, enabling non-technical teammates to publish updates with faster turnaround.

Skills

JavaScript, TypeScript, Python, Node.js, Express, FastAPI, Flask, Pydantic, GraphQL, TypeGraphQL, Apollo Federation, PostgreSQL, MongoDB, OpenSearch/Elasticsearch, AWS, Docker, Kubernetes, Kafka, GitHub Actions, GitLab CI, Jest, React Testing Library, Cypress, k6, React, Next.js, Tailwind, shadcn/ui, MUI, Git

Public Talks

Codesmith's Lecture Series

- Express and the Middleware Design Pattern
- Databases
- Authentication with Cookies and Sessions
- Data Structures: Linked Lists and BSTs
- Asynchronicity in JS

SingleSprout Speaker Series

- State Management Alternatives

Codesmith Intro to JS

- Functions, Objects, and the Execution Context

Projects

next-persist

Built and open-sourced a lightweight Next.js utility that persists non-critical client state while remaining SSR/SSG-safe.

Education

B.Eng Mechanical Engineering

CUNY City College 2018

Interests

Hosting bakery and pizza pop-ups, backpacking, volleyball, climbing
